

ABSTRACT

The present invention relates generally to a comfort management system for equine and, in particular, to a multi-purpose, multi-functional hoof-ware device, boot or shoe and multiple, interchangeable inserts for all equine hooves that uses, attaches, wraps, and fits the hoof while the equine is stalled, walking, trotting, loping for the purposes of protection, healing, alignment, cushioning and/or any other medicinal purposes for any given period of time fitting all sizes of equine hooves in multiple hoof environments, such as, diagnostics, normal use, during and after performance, corrective, medicinal purposes, emergencies situations, for preventative purposes, and rehabilitation of the hoof.
